Family Medicine: A Practical Approach shares essential tools for developing a successful practice and basic clinical methods and principles that will guide medical students, residents, general practitioners, and certified family physicians through the daily routine of a family practitioner. Beginning with a thorough definition and history of family practice, Khalid S. Al-Gelban, Yahia M. Al-Khalidi, and Mohammad M. Diab provide a comprehensive overview of a medical discipline where the family physician is a skilled clinician and the doctor-patient relationship is central. Al-Gelban, Al-Khalidi, and Diab cover a broad range of topics that include medical ethics, problem solving processes, and key areas for action to improve health while teaching specific methods for diagnosing illness, prescribing medicine, and ensuring patient compliance. Medical professionals will also learn how to interview patients with specific symptoms and conduct physical examinations that will lead to accurate diagnoses and successful treatment plans. From anxiety disorders to insomnia to hypertension, Family Medicine: A Practical Approach will lead medical

Sheds new light on the microbial ecology and physiology of the Earth's polar regions. • Examines the microbial investigations during the International Polar Year of 2008 focusing on the Arctic and Antarctic, along with earlier investigations on critical environmental issues such as climate change, ozone depletion, and elemental cycling. • Offers a survey of what is known and unknown about the microbial inhabitants of polar environments, addresses the adaptations and physiology of cold-adapted microorganisms, and explores the ecological role that polar microbial communities play in biogeochemical cycling. • Presents the challenges that polar and subpolar microorganisms face and describes the lowest temperatures in which microbial life can exist—and the prospects for life on other planets. Recommended for a general microbiology audience as well as for scientists and students in all areas of biology and geomicrobiology.

The forest inventory. Planning principles. Forest and other land-use classification. Inventory sampling design. Aerial photography in forest inventory. Maps and mapping.
