The average for the lab final last fall was 60 or 61 IIRC. It is a hard exam, so study a lot for it. But there is a group portion that will help you out, and the TAs marked the presentations a bit easier than most assignments. Also, the quizzes in the lab and pre-lab quizzes are also some of the easier marks in that lab.

Calculate the mean (\bar{x}) of a set of data Subtract the mean from each point of data to determine $(x - \bar{x})$. You'll do this for each data point, so you'll have multiple $(x - \bar{x})$.; Square each of the resulting numbers to determine $(x - \bar{x})^2$. As in step 2, you'll do this for each data point, so you'll have multiple $(x - \bar{x})^2$.; Add the values from the previous step together to get $\sum (x - \bar{x})^2$.
