This book is a critique of western systematic theology. It borrows insights from India and other traditions; it is not a synthesis of religious traditions. The book includes two parts, method and systematics. It examines the traditional topics of systematic theology - topics such as the existence and nature of God, revelation and reason, religious ethics and human practice, the relation of God to the world, Christology, and eschatology - and allows these topics to grow in conversation with India and to change according to dialogical insights. The book is prompted by a perceived need to cross the boundaries between western and Indian worldviews in a systematic and comprehensive way. The purpose of the book is to enable scholars worldwide to extend their theological resources and to look anew at the problems and prospects of a comparative, systematic theology.

The Oxford Handbook of Systematic Theology brings together a set of original and authoritative accounts of all the major areas of current research in Christian systematic theology, offering a thorough survey of the state of the discipline and of its prospects for those undertaking research and teaching in the field. The Handbook engages in a comprehensive examination of themes and approaches, guiding the reader through current debates and literatures in the context of the historical development of systematic theological reflection. Organized thematically, it treats in detail the full array of topics in systematic theology, as well as questions of its sources and norms, its relation to other theological and non-theological fields of enquiry, and some major trends in current work. Each chapter provides an analysis of research and debate on its topic. The focus is on doctrinal (rather than historical) questions, and on major (rather than ephemeral) debates. The aim is to stimulate readers to reach theological judgements on the basis of consideration of the range of opinion. Drawn from Europe, the UK, and North America, the authors are all leading practitioners of the discipline. Readers will find expert guidance as well as creative suggestions about the future direction of the study of Christian doctrine.

Drawing upon the author s three decades of work in comparative theology, this is a pertinent and comprehensive introduction to the field, which offers a clear guide to the reader, enabling them to engage in comparative study. The author has three decades of experience of work in the field of comparative theology and is ideally placed to write this book Today s increasing religious diversity makes this a pertinent and timely publication Unique in the depth of its introduction and explanation of the discipline of comparative theology Provides examples of how comparative theology works in the new global context of human religiosity Draws on examples specific to Hindu-Christian studies to show how it is possible to understand more deeply the wider diversity around us. Clearly guides the reader, enabling them to engage in comparative study

This book is an extended, critical reflection on the state of interreligious dialogue in its modern version. While there has been some important writing in the field of comparative theology, there has been no extended, critical reflection on the state of the discipline in its modern version, its strengths and problematic areas as it grows as a serious theological and scholarly discipline. This work of young scholars in conversation with one another, remedies this lack by, as it were, taking the discipline apart and putting it back together again. The volume seeks to understand how to learn from multiple religions in a way that is truly open to those religions on their own terms, while yet being rooted in the tradition/s that we bring to our interreligious study.

This comprehensive volume brings together a distinguished editorial team, including some of the field's pioneers, to explore the aims, practice, and historical context of interfaith collaboration. Explores in full the background, history, objectives, and discourse between the leaders and practitioners of the world's major religions Examines relations between religions from around the world, moving well beyond the common focus on Christianity, to also cover over 12 major religions Features a wealth of case studies on contemporary interreligious dialogue Charts a long-term shift away from a competitive rivalry between belief systems, and a change in focus towards the more respectful, cooperative approach reflected in institutions such as the World Council of Churches Includes up-to-date commentary on the growing dialogue of recent years, written by some of the leading figures working in the field of interfaith discourse

A number of relatively new technologies, such as Enterprise Resource Planning systems, the Internet and intranets, have entered the organizational landscape. These technologies have not only enabled a wide range of social and organizational transformations, but have also challenged much of the received wisdom that operates in academic and industrial discourses. This book attempts to capture some of these strands by discussing the social and organizational issues surrounding the implementation and use of these new technologies in organizational processes. Some of the contributions are critical and reflexive by nature, while others offer rich insights through the analysis of cases. The book represents a wide scope of traditions of thought, as well as research approaches, in addressing these emerging issues. A number of practical and theoretical topics are discussed in detail, including: Implementation of ERP; Electronic commerce; Intranet implementation; The management of standards; Issues of organizational analysis; Understanding BPR tools; Collaborative technologies; Knowledge work environments. This book contains the selected proceedings of the International Working Conference on New Information Technologies in Organizational Processes: Field Studies and Theoretical Reflections on the Future of Work, organized by the International Federation for Information Processing (IFIP) and held in St. Louis, Missouri, USA, in August 1999. This valuable new title will be essential reading for researchers working in information systems and management, technology, social and organization studies.
