Digital analysis is an advanced application of data analysis for auditors and fraud investigators interested in preventing and detecting fraud. In fact, using digital analysis, fraud symptoms are easier to find when there are millions of transactions than where there are only a few thousand transactions. It expands on the various techniques by identifying suspicious patterns in the data rather than looking for known symptoms of fraud.

Computer Aided Fraud Prevention and Detection: A Step by ...

Control prevention (preventive control) is a measure to prevent mistakes and fraud before the error or fraud occurred. Detective control is the act of finding errors and fraud after the error / fraud occurred. While the correction control is action taken to correct the error (Bodnar and Hopwood, 2010: 155).
