DC injection brakes only require a small module located with the other motor switchgear and/or drivers, mounted in a remote and convenient location, whereas a friction brake must be mounted somewhere on the rotating system. Friction brakes

Several electrical methods of bringing an AC induction motor to a stop. Two other forms of braking – dynamic braking and regenerative braking – convert mechanical energy generated as the rotor slows down into electrical energy.

When Direct Current (D.C.) Electricity is supplied (Injected) into a rotating Alternating Current (A.C.) motor, the result is a smooth, powerful, braking force. The Drivloc is suitably connected to the Machine so that

device that provides smooth frictionless braking of ac motors. It doesn't use brake discs or shoes so doesn't wear out or need maintenance. It creates a DC stationary 0Hz magnetic field in place of the rotating 50Hz field. This brakes the rotor until it's also stationary.
