Jensen's furthest-reaching book yet, *Dreams* challenges the "destructive nihilism" of writers like Richard Dawkins and Sam Harris who believe that there is no reality outside what can be measured using the tools of science. He introduces the mythologies of ancient cultures and modern indigenous peoples as evidence of alternative ways of understanding reality, informed by thinkers such as American Indian writer Jack Forbes, theologian and American Indian rights activist Vine Deloria, Shaman Martin Prechtel, Dakota activist and scholar Waziyatawin, and Okanagan Indian writer Jeannette Armstrong. He draws on the wisdom of Dr. Paul Staments, author of *Mycelium Running: How Mushrooms Can Help Save the World*, sociologist Stanley Aronowitz, who discusses science's lack of accountability to the earth, and many more. As in his other books, Jensen draws heavily from his own life experience living alongside the frogs, redwoods, snails, birds and bears of the upper northwest, about which he writes with exquisite tenderness. Having taken on the daunting task of understanding one's dreams as a source of knowledge, Jensen achieves the near-impossible in this breathtakingly brave and ambitious new work.

Jensen's furthest-reaching book yet, *Dreams* challenges the "destructive nihilism" of writers like Richard Dawkins and Sam Harris who believe that there is no reality outside what can be measured using the tools of science. He introduces the mythologies of ancient cultures and modern indigenous peoples as evidence of alternative ways of understanding reality, informed by thinkers such as American Indian writer Jack Forbes, theologian and American Indian rights activist Vine Deloria, Shaman Martin Prechtel, Dakota activist and scholar Waziyatawin, and Okanagan Indian writer Jeannette Armstrong. He draws on the wisdom of Dr. Paul Staments, author of *Mycelium Running: How Mushrooms Can Help Save the World*, sociologist Stanley Aronowitz, who discusses science's lack of accountability to the earth, and many more. As in his other books, Jensen draws heavily from his own life experience living alongside the frogs, redwoods, snails, birds and bears of the upper northwest, about which he writes with exquisite tenderness. Having taken on the daunting task of understanding one's dreams as a source of knowledge, Jensen achieves the near-impossible in this breathtakingly brave and ambitious new work.

In this far-ranging and heartening collection, Derrick Jensen gathers conversations with environmentalists, theologians, Native Americans, psychologists, and feminists, engaging some of our best minds in an exploration of more peaceful ways to live on Earth. Included here is Dave Foreman on biodiversity, Matthew Fox on Christianity and nature, Jerry Mander on technology, and Terry Tempest Williams on an erotic connection to the land. With intelligence and compassion, *Listening to the Land* moves from a look at the condition of the environment and the health of our spirit to a beautiful evocation of eros and a life based on love.

Jensen and Draffan look at the way machine readable devices that track our identities and purchases have infiltrated our lives and have come to define our culture.

In this impassioned polemic, radical environmental philosopher Derrick Jensen debunks the near-universal belief in a hierarchy of nature and the superiority of humans. Vast and underappreciated complexities of nonhuman life are explored in detail—from the cultures of pigs and prairie dogs, to the creative use of tools by elephants and fish, to the acumen of caterpillars and fungi. The paralysis of the scientific establishment on moral and ethical issues is confronted and a radical new framework for assessing the intelligence and sentience of nonhuman life is put forth. Jensen attacks mainstream environmental journalism, which too often limits discussions to how ecological changes affect humans or the economy—with little or no regard for nonhuman life. With his signature compassionate logic, he argues that when we separate ourselves from the rest of nature, we in fact orient ourselves against nature, taking an unjust and, in the long run, impossible position. Jensen expresses profound disdain for the human industrial complex and its ecological excesses, contending that it is based on the systematic exploitation of the earth. Page by page, Jensen, who has been called the philosopher-poet of the environmental movement, demonstrates his deep appreciation of the natural world in all its intimacy, and sounds an urgent call for its liberation from human domination.

Derrick Jensen takes no prisoners in *The Culture of Make Believe*, his brilliant and eagerly awaited follow-up to his powerful and lyrical *A Language Older Than Words*. What begins as an exploration of the lines of thought and experience that run between the massive lynchings in early twentieth-century America to today's death squads in South America soon explodes into an examination of the very heart of our civilization. *The Culture of Make Believe* is a book that is as impeccably researched as it is moving, with conclusions as far-reaching as they are shocking.

At once a beautifully poetic memoir and an exploration of the various ways we live in the world, *A Language Older Than Words* explains violence as a pathology that touches every aspect of our lives and indeed affects all aspects of life on Earth. This chronicle of a young man's drive to transcend domestic abuse offers a challenging look at our worldwide sense of community and how we can make things better.

For years, Derrick Jensen has asked his audiences, "Do you think this culture will undergo a voluntary transformation to a sane and sustainable way of life?" No one ever says yes. Deep Green Resistance starts where the environmental movement leaves off: industrial civilization is incompatible with life. Technology can't fix it, and shopping—no matter how green—won ' t stop it. To save this planet, we need a serious resistance movement that can bring down the industrial economy. Deep Green Resistance evaluates strategic options for resistance, from nonviolence to guerrilla warfare, and the conditions required for those options to be successful. It provides an exploration of organizational structures, recruitment, security, and target selection for both aboveground and underground action. Deep Green Resistance also discusses a culture of resistance and the crucial support role that it can play. Deep Green Resistance is a plan of action for anyone determined to fight for this planet—and win.

Two of America's most talented activists team up to deliver a bold and hilarious satire of modern environmental policy in this fully illustrated graphic novel. The U.S. government gives robot machines from space permission to eat the earth in exchange for bricks of gold. A one-eyed bunny rescues his friends from a corporate animal-testing laboratory. And two little girls figure out the secret to saving the world from both of its enemies (and it isn't by using energy-efficient light bulbs or biodiesel fuel). As *The World Burns* will inspire you to do whatever it takes to stop ecocide before it ' s too late.

" This disturbing but very important book makes clear we must dig deeper than the normal solutions we are offered. " —Yvon Chouinard, founder of Patagonia Works 'Bright Green Lies exposes the hypocrisy and bankruptcy of leading environmental groups and their most prominent cheerleaders. The best-known environmentalists are not in the business of speaking truth, or even holding up rational solutions to blunt the impending ecocide, but instead indulge in a mendacious and self-serving delusion that provides comfort at the expense of reality. They fail to state the obvious: We cannot continue to wallow in hedonistic consumption and industrial expansion and survive as a species. The environmental debate, Derrick Jensen and his coauthors argue, has been distorted by hubris and the childish desire by those in industrialized nations to sustain the unsustainable. All debates about environmental policy need to begin with honoring and protecting, not the desires of the human species, but with the sanctity of the Earth itself. We refuse to ask the right questions because these questions expose a stark truth—we cannot continue to live as we are living. To do so is suicidal folly. " Tell me how you seek, and I will tell you what you are seeking. ' The German philosopher Ludwig Wittgenstein said. This is the power of Bright Green Lies. It asks the questions most refuse to ask, and in that questioning, that seeking, uncovers profound truths we ignore at our peril. " —Chris Hedges, Pulitzer Prize-winning journalist and author of *America: The Farewell Tour*
