This volume of Progress in Brain Research follows on from the 32nd International Symposium of the Groupe de recherche sur le système nerveux central (GRSNC), May 2010, and aims to provide an overview of the various neural mechanisms that contribute to learning new motor and sensory skills, and to adapting to changed circumstances, including the use of devices and implants to substitute for lost sensory or motor abilities (brain machine interfaces). The focus is on recent developments covering five major themes:

- Mechanisms to improve motor performance
- Neuro-rehabilitation of motor function
- Mechanisms to enhance sensory perception
- Cross modal interaction for enhancing sensorimotor performance
- Assistive technologies to enhance sensorimotor performance

This volume focuses on the translation of scientific knowledge into applications and strategies that can help restore lost function following injury or disease including assistive neuroprosthetic technologies to enhance sensorimotor performance and neurorehabilitation. Leading authors review the state-of-the-art in their field of investigation and provide their views and perspectives for future research. Chapters are extensively referenced to provide readers

with a comprehensive list of resources on the topics covered. All chapters include comprehensive background information and are written in a clear form that is also accessible to the non-specialist

Based on the result of a symposium held at the Universite de Montreal, May 2010.

Doping, Performance-Enhancing Drugs, and Hormones in Sport: Mechanisms of Action and Methods of Detection examines the biochemistry and bioanalytical aspects of performance-enhancing drugs (PEDs) and other questionable procedures used by athletes to enhance performance. The book informs the specialist of emerging knowledge and techniques and allows the non-specialist to grasp the underlying science and current practice of the discipline. With clear and compelling language appropriate for a broad spectrum of readers, this book provides background on prevalence, types of agents, their actual or supposed benefits, and their negative effects on health. The technical aspects of detection are discussed, followed by a discussion of why detection is a problematic and still-evolving science. To facilitate comprehension, each chapter is organized in a uniform way with six sections: (1) standard medical uses, (2) why the drugs are used by athletes, (3) biological mechanism of action, (4) what research says about efficacy in improving performance, (5)

major health side effects from use and abuse in sport, and 6) concluding key points. Presents the scientific concepts of how performance enhancers work, how they are used, and how they are detected and masked from detection Features language that is neither simplistic to scientists nor too sophisticated for a large, diverse global audience Provides a short “close-up” in each chapter to illustrate key topics that engage, entertain, and create a novel synthesis of thought

Through his own trading experiences and those of individuals he has mentored, Dr. Brett Steenbarger is familiar with the challenges that traders face and the performance and psychological strategies that can meet those challenges. In *Enhancing Trader Performance*, Steenbarger shows you how to transform talent into trading skill through a structured process of expertise development and reveals how this approach can help you achieve market mastery.

It is a commonly held belief that athletes, particularly body builders, have greater requirements for dietary protein than sedentary individuals. However, the evidence in support of this contention is controversial. This book is the latest in a series of publications designed to inform both civilian and military scientists and personnel about issues related to nutrition

and military service. Among the many other stressors they experience, soldiers face unique nutritional demands during combat. Of particular concern is the role that dietary protein might play in controlling muscle mass and strength, response to injury and infection, and cognitive performance. The first part of the book contains the committee's summary of the workshop, responses to the Army's questions, conclusions, and recommendations. The remainder of the book contains papers contributed by speakers at the workshop on such topics as, the effects of aging and hormones on regulation of muscle mass and function, alterations in protein metabolism due to the stress of injury or infection, the role of individual amino acids, the components of proteins, as neurotransmitters, hormones, and modulators of various physiological processes, and the efficacy and safety considerations associated with dietary supplements aimed at enhancing performance.

Agricultural cooperatives and producer organizations are institutional innovations which have the potential to reduce poverty and improve food security. This book presents a raft of international case studies, from developing and transition countries, to analyse the internal and external challenges that these complex organizations face and the solutions that they have developed. The contributors provide an increased

understanding of the transformation of traditional community organizations into modern farmer-owned businesses. They cover issues including: the impact on rural development and inclusiveness, the role of social capital, formal versus informal organizations, democratic participation and member relations, and their role in value chains. Students and scholars will find the book's multidisciplinary approach useful in their research. It will also be of interest to policy-makers seeking to understand the wide diversity of organizational forms and functions. NGOs, donors and governments seeking to support rural developments will benefit from the discussions raised in this book.

Corporations spend millions of dollars on performance improvement, employee training and development, work system redesign, and other organizational improvement efforts. Much of this money is wasted because the preliminary analysis and diagnosis has not been done to link these programs to an organization's real business needs, goals, and processes. The truth is that in order for any performance improvement effort to add value to the organization, deep analysis is required. Analysis for Improving Performance details a systematic approach for doing the rigorous preparatory analysis that is vital to shaping and developing successful performance improvement efforts.
