Entrepreneurial finance is not a science, with numbers to crunch to get a "solution" to problems. It is a practice of applying good judgments to make the most of limited opportunities and resources, and this process involves risk-taking under conditions of extreme uncertainty, and the application of certain skills, methodology and intuition.

Practical and applications (rather than theory) based, this book focuses on the needs of individuals interested in starting a small business -- primarily those organized as sole proprietorships, partnerships, or small Subchapter S corporations. It emphasizes small businesses exclusively -- with specific examples of the non-corporate market. The book is mathematically accessible to those with limited mathematical background (formulas are explained rather than derived, and only basic math is used in illustrations and solutions). A full case study is referred to throughout narrative and an accompanying CD-ROM includes all tables in Excel format.
