The book includes an analysis of the constitutionality of many recommended policies and data from a national public opinion poll that reflects support among the majority of Americans—including gun owners—for stronger gun policies.

This excerpt from the “masterful, timely, data-driven” study of the gun control debate examines the potential of stronger purchasing laws (Choice). As the debate on gun control continues, evidence-based research is needed to answer a crucial question: How do we reduce gun violence? One of the biggest gun policy reforms under consideration is the regulation of firearm sales and stopping the diversion of guns to criminals. This selection from the major anthology of studies Reducing Gun Violence in America presents compelling evidence that stronger purchasing laws and better enforcement of these laws result in lower gun violence. Additional material for this edition includes an introduction by Michael R. Bloomberg and Consensus Recommendations for Reforms to Federal Gun Policies from the Johns Hopkins University.

"This book will differ from other books on gun violence in that it will serve as both a primer and a handbook for public health practitioners, advocates, students, and the public, and will make information about the public health approach to gun violence accessible. Using a conceptual framework that has led to successes in decreasing motor vehicle related deaths and disability, the book will focus on effective strategies to engage in productive dialogue about gun safety while protecting the rights of responsible gun owners. It is meant to be a resource rather than a textbook to be read cover-to-cover"--

Perhaps never before has an objective, evidence-based review of the intersection between gun violence and mental illness been more sorely needed or more timely. Gun Violence and Mental Illness, written by a multidisciplinary roster of authors who are leaders in the fields of mental health, public health, and public policy, is a practical guide to the issues surrounding the relation between firearms deaths and mental illness. Tragic mass shootings that capture headlines reinforce the mistaken beliefs that people with mental illness are violent and responsible for much of the gun violence in the United States. This misconception stigmatizes individuals with mental illness and distracts us from the awareness that approximately 65% of all firearm deaths each year are suicides. This book is an apolitical exploration of the misperceptions and realities that attend gun violence and mental illness. The authors frame both pressing social issues as public health problems subject to a variety of interventions on individual and collective levels, including utilization of a novel perspective: evidence-based interventions focusing on assessments and indicators of dangerousness, with or without indications of mental illness. Reader-friendly, well-structured, and accessible to professional and lay audiences, the book: * Reviews the epidemiology of gun violence and its relationship to mental illness, exploring what we know about those who perpetrate mass shootings and school shootings. * Examines the current legal provisions for prohibiting access to firearms for those with mental illness and whether these provisions and new mandated reporting interventions are effective or whether they reinforce negative stereotypes associated with mental illness. * Discusses the issues raised in accessing mental health treatment in regard to diminished treatment resources, barriers to access, and involuntary commitment.* Explores novel interventions for addressing these issues from a multilevel and multidisciplinary public health perspective that does not stigmatize people with mental illness. This includes reviews of suicide risk assessment; increasing treatment engagement; legal, social, and psychiatric means of restricting access to firearms when people are in crisis; and, when appropriate, restoration of firearm rights. Mental health clinicians and trainees will especially appreciate the risk assessment strategies presented here, and mental health, public health, and public policy researchers will find Gun Violence and Mental Illness a thoughtful and thought-provoking volume that eschews sensationalism and embraces serious scholarship.

An in-depth analysis of the folklore surrounding gun use and the state of the debate in today's political climate.

In early 2018, teen-led March for Our Lives events across the United States protested gun violence, demanded change to save lives, and registered voters toward that end. This authoritative exploration of guns, gun violence, and gun control explores the Second Amendment, the history of guns and gun laws in the United States, legal restrictions to gun ownership, and the devastation of mass shootings. Through an objective look at individual versus collective rights, readers will be able to offer well-informed answers to questions such as should young people own assault rifles? What about terrorists and the mentally ill? Read the book to make an informed argument and support your point of view.

One of The New York Times' 16 New Books to Watch for in March One of Publishers Weekly's Most Anticipated Books of the Year One of Newsweek's Most Highly Anticipated Books of The Year One of Buzzfeed's Most Anticipated Books the Year Based on the acclaimed series—a finalist for the Pulitzer Prize—an intimate account of the devastating effects of gun violence on our nation's children, and a call to action for a new way forward In 2017, seven-year-old Ava in South Carolina wrote a letter to Tyshaun, an eight-year-old boy from Washington, DC. She asked him to be her pen pal; Ava thought they could help each other. The kids had a tragic connection—both were traumatized by gun violence. Ava's best friend had been killed in a campus shooting at her elementary school, and Tyshaun's father had been shot to death outside of the boy's elementary school. Ava's and Tyshaun's stories are extraordinary, but not unique. In the past decade, 15,000 children have been killed from gunfire, though that number does not account for the kids who weren't shot and aren't considered victims but have nevertheless been irreparably harmed by gun violence. In Children Under Fire, John Woodrow Cox investigates the effectiveness of gun safety reforms as well as efforts to manage children's trauma in the wake of neighborhood shootings and campus massacres, from Columbine to Marjory Stoneman Douglas. Through deep reporting, Cox addresses how we can effect change now, and help children like Ava and Tyshaun. He explores their stories and more, including a couple in South Carolina whose eleven-year-old son shot himself, a Republican politician fighting for gun safety laws, and the charlatans infiltrating the school safety business. In a moment when the country is desperate to better understand and address gun violence, Children Under Fire offers a way to do just that, weaving wrenching personal stories into a critical call for the United States to embrace practical reforms that would save thousands of young lives.

This book critically examines the link between guns and violence. It weighs the value of guns for self-protection against the adverse effects of gun ownership and carrying. It also analyses the role of public opinion, the Second Amendment to the US Constitution, and the firearms industry and lobby in impeding efforts to prevent gun violence. Confronting Gun Violence in America explores solutions to the gun violence problem in America, a country where 90 people die from gunshot wounds every day. The wide-range of solutions assessed include: a national gun licensing system; universal background checks; a ban on military-style weapons; better regulatory oversight of the gun industry; the use of technologies, such as the personalization of weapons; child access prevention; repealing laws that encourage violence; changing violent norms; preventing retaliatory violence; and strategies to rebuild American communities. This accessible and incisive book will be of great interest to students and researchers in criminology and sociology, as well as practitioners and policy-makers with an interest in gun ownership and violence.

Mass shootings have become the “new normal” in American life. The same can be said for the public debate that follows a shooting: blame is cast, political postures are assumed, but no meaningful policy changes are enacted. In After Gun Violence, Craig Rood argues that this cycle is the result of a communication problem. Without advocating for specific policies, Rood examines how Americans talk about gun violence and suggests how we might discuss the issues more productively and move beyond our current, tragic impasse. Exploring the ways advocacy groups, community leaders, politicians, and everyday citizens talk about gun violence, Rood reveals how the gun debate is about far more than just guns. He details the role of public memory in shaping the discourse, showing how memories of the victims of gun violence, the Second Amendment, and race relations influence how gun policy is discussed. In doing so, Rood argues that forgetting and misremembering this history leads interest groups and public officials to entrenched positions and political failure and drives the public further apart. Timely and innovative, After Gun Violence advances our understanding of public discourse in an age of gridlock by illustrating how public deliberation and public memory shape and misshape one another. It is a search to understand why public discourse fails and how we can do better.

A complete guide to the origins and everyday experience of gun violence in America—and a series of solutions to put a stop to its destruction once and for all. Gun violence is a problem with many faces, but seemingly no solution. From mass shootings to deadly domestic abuse to police officers opening fire, it permeates American life. And yet it feels impossible to address. The lines are firmly drawn and the federal government has not passed any legislation to reduce gun ownership in over twenty-five years. That's why it's time to look at the issue differently. In this revelatory collection, gun violence in America is addressed from three angles: how gun violence affects us today, how we have gotten to this juncture legally and socially, and finally, what we can do to reduce and end gun violence in America. Too many lives are lost by gun fire—around 15,000 a year—but we do have the tools to address this crisis. Top journalists, organizations, and anti-gun-violence advocacy groups are represented here—from Pamela Colloff to Ibram X. Kendi to Everytown for Gun Safety and the Giffords Organization—to collect the most comprehensive, thoughtful and practical guide on gun violence in America. There are no deadlocks and no excuses—we have the tools to stop gun violence now.
