Presents data on the Palaearctic nesting populations of Great White and Dalmation Pelicans, with an emphasis on the importance of the former USSR to the species.

This is the first ever monumental and scientific documentation of the faunal wealth of the Indian Desert state of Rajasthan. This volume, the first of two, provides background on Rajasthan and covers species diversity and distribution of fauna. A scholarly contribution to the field of knowledge, it provides novel and vital information on the vertebrate faunal heritage of India ' s largest state. Broadly falling under the Indo-Malaya Ecozone, the three major biomes of Rajasthan include deserts and xeric shrublands, tropical and subtropical dry broadleaf forests, and tropical and subtropical moist broadleaf forests. The corresponding ecoregions to the above biomes are, respectively, the Thar Desert and northwestern thorn scrub forests, the Khathiar-Gir dry deciduous forests, and the Upper Gangtic Plains moist deciduous forests. Contrary to popular belief, the well-known Thar or Great Indian Desert occupies only a part of the state. Rajasthan is diagonally divided by the Aravalli mountain ranges into arid and semi-arid regions. The latter have a spectacular variety of highly diversified and unique yet fragile ecosystems comprising lush green fields, marshes, grasslands, rocky patches and hilly terrains, dense forests, the southern plateau, fresh water wetlands, and salt lakes. Apart from the floral richness, there is faunal abundance from fishes to mammals. In this volume, the various flagship and threatened species are described in the 24 chapters penned by top notch wildlife experts and academics. The world famous heronry, tiger reserves, wildlife sanctuaries and some threat-ridden biodiversity rich areas shall certainly

draw the attention of readers from around the world.

A glance at the map of Europe in 1500 will show numerous unfamiliar divisions and names, especially in the central and eastern portions. Only in the extreme west, along the Atlantic seaboard, will the eye detect geographical boundaries which resemble those of the present day. There, England, France, Spain, and Portugal have already taken form. In each one of these countries is a real nation, with a single monarch, and with a distinctive literary language...

This book offers a concise description of the environment and water resources in Turkmenistan. The focus is on the water bodies of Turkmenistan – the Caspian Sea, Kara-Bogaz-Gol Bay, Sarykamysch Lake, Amu Darya River, and the Karakum Canal. Respected experts from six different countries cover the landscape-geographical features, the Karakum Desert, biodiversity (especially of birds and fishes) and ecosystems, as well as regional climate change. Special attention is paid to the Altyn Asyr Lake water reclamation project, to the morphometric characteristics of the Karashor Depression, and to the four-year-long satellite monitoring of the construction area in the vicinity of the Karashor Depression. The information presented is based on observational data and scientific literature, mainly published in Russian. This is the first English book on the Altyn Asyr Project. It addresses specialists working in various fields of environmental problems and ecology, water resources and management, land reclamation and agriculture, regional climate change, and international cooperation in the water sector in Turkmenistan and Central Asia.
