Until recently, the contribution of immunological knowledge to the under standingand management ofENTdisorders was slight, being largely confined to the appreciation that many rhinitic patients were allergic. Happily, this situation is rapidly changing: the immunological basis of many disorders of the ears, nose and throat is becoming recognized and the mechanisms of the reactions involved are being elucidated. From this, rational therapy should evolve. This book aims to highlight some of the areas in which immunological mechanisms are involved in otorhinolaryngology. It is written by experts in their respective fields of immunology and allergy, otology, rhinology and pathology. It opens with an overview ofthe pathways ofthe immune response and the cells and molecules involved, leading to an appreciation of the normal defence mechanisms of the upper respiratory tract and possible areas offailure. There is then a chapter on HIV infection and how this may present to otorhinolaryngologists. The normal function of the tonsil and the immunological effects oftonsillectomy are then considered. The varying roles of fungi in ENT disorders ranging from commensal through allergen to invasive organisms is assessed by Professor R. J. Hay. Perhaps the most obvious immunological contribution to management thus far lies in the immunocytochemical diagnosis of pathological conditions of the ears, nose and throat and this is covered in a chapter by Professor Leslie Michaels.

A consistent and near complete survey of the important progress made in the field over the last few years, with the main emphasis on the rigidity method and its applications. Among others, this monograph presents the most successful existence theorems known and construction methods for Galois extensions as well as solutions for embedding problems combined with a collection of the existing Galois realizations.

This groundbreaking work features two essays written by the renowned mathematician Ilan Vardi. The first essay presents a thorough analysis of contrived problems suggested to "undesirable" applicants to the Department of Mathematics of Moscow University. His second essay gives an in-depth discussion of solutions to the Year 2000 International Mathematical Olympiad, with emphasis on the comparison of the olympiad problems to those given at the Moscow University entrance examinations. The second part of the book provides a historical background of a unique phenomenon in mathematics, which flourished in the 1970s-80s in the USSR. Specially designed math problems were used not to test students' ingenuity and creativity but, rather, as "killer problems," to deny access to higher education to "undesirable" applicants. The focus of this part is the 1980 essay, "Intellectual Genocide", written by B Kanevsky and V Senderov. It is being published for the first time. Also featured is a little-known page of the Soviet history, a rare example of the oppressed organizing to defend their dignity. This is the story of the so-called Jewish People's University, the inception of which is associated with Kanevsky, Senderov and Bella Subbotovskaya.

The Washington obelisk (Monument) is the target of tourists, photographers and mystery lovers. Tourists look at him admiring his monumentality, photograph him for memories and evidence that they were there, and mystery lovers try to make sense of him, and mostly hear wrong opinions that it is a sign of godlessness, the phallus, the building of Antichrist with satanic meaning. Nothing is so, but the purpose of the obelisk is metrology combined with the symbolism of numbers.

Publisher Description

A groundbreaking introduction to vectors, matrices, and least squares for engineering applications, offering a wealth of practical examples.

Ari Daniels didn't count on her whole world tumbling down around her in a mess of shredded promises, broken love, and unbelievable heartbreak. Alone and stricken with grief, she shouldered the blame and eventually closed her heart off, refusing to open it for another. After all, anytime she tried, guilt and regret were waiting in the wings to remind her how painful it was. A bet and one steamy night with a stranger force Ari to confront all she's been hiding behind. She tries to move on, but he refuses to stand down, wanting what she is terrified to give-herself. This man may very well destroy her in the end, especially when it's clear he has his own demons. What happens when two broken souls come together, finally allowing themselves to believe in the beauty of love ... only to have to fight harder than ever to keep it?
