With NATO's bombing campaign against Serbia now over, what strategic, long-range plans will the alliance employ to restore stability to the region? As the global economy continually changes in response to worldwide events, what investment strategies will firms implement to cope with changing markets? And how can major pharmaceutical companies solve the problem of having newly-developed products abandoned before they can even be launched on the market? This book is designed and written to give the applied statistician an insight into all these areas of investigation.

Get the entire history of the best trucks on the road. The International Truck and Engine Corporation has built the trucks that have been a staple of both agricultural and industrial trucking for nearly 100 years. *International Harvester Trucks: The Complete History* tells the complete story of the light-, medium-, and heavy-duty trucks, vans, and station wagons built by International Harvester during over a century of history, starting from the company's early days, through its first truck model in 1907, and right up to the present. The focus is firmly on the trucks themselves including collectible machines such as the Travelall and Scout. Author Patrick R. Foster is one of the world's premier transportation historians. His accessible writing style, illustrated with hundreds of never-before-seen archival photographs, makes this book the best examination of one of the world's most prolific truck manufacturers.

slavery. For 12 years, he was kept in bondage as a slave in Louisiana--Twelve Years a Slave is his moving and raw account of survival and life as a slave. This edition includes the full book as well as a comprehensive companion with historical notes, character overview, themes overview, and chapter summaries.

For the twenty three years prior to its banning on June 21 1994, Tempo magazine was Indonesia's most important news weekly, and its editor in chief one of Indonesias's leading poets and intellectuals. This book tells the story of the paper, its staff and many supporters, and of its relations with political movements.

We are facing a global energy crisis caused by world population growth, an escalating increase in demand, and continued dependence on fossil-based fuels for generation. It is widely accepted that increases in greenhouse gas concentration levels, if not reversed, will result in major changes to world climate with consequential effects on our society and economy. This is just the kind of intractable problem that Purdue University's Global Policy Research Institute seeks to address in the Purdue Studies in Public Policy series by promoting the engagement between policy makers and experts in fields such as engineering and technology. Major steps forward in the development and use of technology are required. In order to achieve solutions of the required scale and magnitude within a limited timeline, it is essential that engineers be not only technologically-adept but also aware of the wider social

and political issues that policy-makers face. Likewise, it is also imperative that policy makers liaise closely with the academic community in order to realize advances. This book is designed to bridge the gap between these two groups, with a particular emphasis on educating the socially-conscious engineers and technologists of the future. In this accessibly-written volume, central issues in global energy are discussed through interdisciplinary dialogue between experts from both North America and Europe. The first section provides an overview of the nature of the global energy crisis approached from historical, political, and sociocultural perspectives. In the second section, expert contributors outline the technology and policy issues facing the development of major conventional and renewable energy sources. The third and final section explores policy and technology challenges and opportunities in the distribution and consumption of energy, in sectors such as transportation and the built environment. The book's epilogue suggests some future scenarios in energy distribution and use.
