The Claytons were originally conceived as the British Railways "standard" Type 1 diesel-electric locomotive, superseding other Type 1 classes delivered as part of the 'Pilot Scheme' fleet.

Download File PDF Paxman Diesel Engines

The early classes suffered from poor driver visibility, and the plan from 1962 was for subsequent trip-freight and local yard shunting locomotives to be center-cab machines with low bonnets to dramatically improve

Download File PDF Paxman Diesel Engines

visibility. To this extent the Claytons were highly successful and popular with operating crews. However, the largely untested high-speed, flat Paxman engines proved to be highly problematical, resulting in

deliveries being curtailed
after 117 locomotives.

Further requirements for
