Despite considerable investments in health facilities worldwide, little systematic evidence is available on how to plan, design and build new facilities that maximise health gain and ensure that services are responsive to the legitimate expectations of users. This book brings together current knowledge about key dimensions of capital investment in the health sector. A number of issues are examined, including new models of long-term care, capacity planning, the impact of capital investment on the health care workforce, markets and competition, systems used for procurement and financing, the whole lifecycle of health facilities, facility management, the wider impact of capital investment on the local community and economy, how care models can be translated into capital asset solutions, and issues of therapeutic and sustainable design. This book is of value to those interested in the planning, financing, construction, and management of new health facilities. It identifies critical lessons that increase the chances that capital projects will be successful.

Originally published in 1952 by a towering figure in nursing history, this book stresses the then novel theory of interpersonal relations as it was relevant to the work of nurses. Her framework suggested that interaction phenomena that occur during patient-nurse relationships have qualitative impact on patient outcomes. While the past four decades have seen a substantial expansion in the use and understanding of interpersonal theory, such as cognitive development and general systems theory, this classic book remains a useful foundation for all nurses as so much subsequent work used this work as its starting point. Springer Publishing Company is delighted to make this book available again.

Florence Nightingale is famous as the " lady with the lamp " in the Crimean War, 1854—56. There is a massive amount of literature on this work, but, as editor Lynn McDonald shows, it is often erroneous, and films and press reporting on it have been even less accurate. The Crimean War reports on Nightingale ' s correspondence from the war hospitals and on the staggering amount of work she did post-war to ensure that the appalling death rate from disease (higher than that from bullets) did not recur. This volume contains much on Nightingale ' s efforts to achieve real reforms. Her well-known, and relatively " sanitized " , evidence to the royal commission on the war is compared with her confidential, much franker, and very thorough Notes on the Health of the British Army, where the full horrors of disease and neglect are laid out, with the names of those responsible.

The hallmark text for nursing faculty seeking to promote the transformative teaching of caring science, Creating a Caring Science Curriculum: A Relational Emancipatory Pedagogy for Nursing reflects the paramount scholarship of Caring Science educators. This second edition intertwines visionary thinking with blueprints, exemplars, and dynamic direction for the application of fundamental principles. It goes beyond the conventional by offering a model that serves as an emancipatory, ethical-philosophical, educational, and pedagogical learning guide for both teachers and students. Divided into five units, the text addresses the history of the caring curriculum revolution and its powerful presence within nursing. Unit I lays the foundation for a Caring Science curriculum. Unit II introduces intellectual and strategic blueprints for caring-based education, including action-oriented approaches for faculty—student relations, teaching/learning skills, pedagogical practices, critical-reflective-creative approaches to evolving human consciousness, and power relation dynamics. Unit III addresses curriculum structure and design, the evolution of a caring-based college of nursing, caring in advanced practice education, and the development of caring consciousness in nurse leaders. It also features real-world exemplars of Caring Science curricula. Unit IV includes an alternative approach to clinical and course-based evaluation, and the text concludes with an exploration of the future of the Caring Science curriculum as a way of emancipating the human spirit. Each chapter is structured to maximize engagement with reflective exercises and learning activities that encourage the integration of theory and practice into the learning process. New to This Edition: Updated chapters, case studies, and learning activities Six new chapters that provide guidance on how to create a Caring Science curriculum Exemplars from institutions that have developed Caring Science curricula Key Features: Provides a broad application of Caring Science for teachers, students, and nursing leaders Features case studies of teacher/student lived learning experiences within a caring—loving pedagogical environment Encourages the integration of theory and practice into the learning process with learning activities and reflective exercises Distills the expertise of world-renowned Caring Science scholars

Nursing Theories and Nursing Practice, 2nd Edition, shows your undergraduate and graduate students how theory will help them improve the ways in which they practice nursing. It contains contributions by the original theorists, including discussion of how theories can be used in practice and examples of implementation written by nurses themselves. to help your students develop critical thinking skills, clear explanations of multiple ways of knowing are detailed, in addition to reflective practice, and background information on the process of theory development.

Nursing theory is a major part of all nursing courses and nurses are encouraged to use theories in practice, but it is not always easy for the student to make a real connection between the two. Drawing on many years' experience of teaching and research, Hugh McKenna addresses the theory needs of both students and qualified staff. He demystifies the confusing terminology associated with nursing theory and shows how all nurses can build theory from practice through reflection and analysis. This text offers step-by-step guidelines on: * how to analyse concepts * how to generate and select theory * how to apply and test theory in practice. Written in a friendly, easy to read style, Nursing Theories and Models puts forward realistic strategies for bridging the theory-practice gap.

Kozier and Erb ' s Fundamentals of Nursing prepares students for practice in a range of diverse clinical settings and help them understand what it means to be a competent professional nurse in the twenty-first century. This third Australian edition has once again undergone a rigorous review and writing process. Contemporary changes in the regulation of nursing are reflected in the chapters and the third edition continues to focus on the three core philosophies: Person-centred care, critical thinking and clinical reasoning and cultural safety. Students will develop the knowledge, critical thinking and clinical reasoning skills to deliver care for their patients in ways that signify respect, acceptance, empathy, connectedness, cultural sensitivity and genuine concern.

Addressing many of the primary conceptual frameworks and theories in nursing, Foundations of Nursing Theory offers concise, informative descriptions of nursing's philosophical origins. The book, a compilation of volumes from Sage's acclaimed Notes on Nursing Theories series, not only assays the development, assumptions, and broad applications of each nursing theory but also provides specific examples of how it relates to both research and practice.

The most comprehensive of its kind, this classic resource in the field of nursing theory provides an in-depth look at 49 theorists of historical, international, and significant importance. Each chapter features a clear, consistent presentation of a key nursing philosophy or theory. Case studies and critical thinking activities help bridge the gap between theory and application. A case study at the end of each theorist chapter puts the theory into a larger perspective, helping you understand how the information can be applied to practice. A Major Concepts & Definitions box in each theorist chapter outlines and summarizes the theory ' s most significant ideas and clarifies content-specific vocabulary. Each theorist chapter concludes with an extensive bibliography outlining numerous primary and secondary sources of information ideal for research projects. Critical Thinking Activities at the end of each theorist chapter challenge you to process the theory presented and apply it to personal and hypothetical practice situations. Introductory chapters provide you with a strong foundation in the history and philosophy of science, logical reasoning, and the theory development process. Diagrams for theories help you visualize and better understand inherently abstract concepts. Each theorist chapter is written by a scholar specializing in that particular theorist ' s work — often an individual who has worked closely with the theorist. Most chapters have been reviewed and edited by the theorist for currency and accuracy, further validating the accounts set forth in the text. Theorist birth (and if applicable, death) dates help you place each individual into a time context. A new chapter introduces the theorist Afaf Meleis and covers her Transition Theory that has helped shape the theoretical development of nursing. Points for further study at the end of each chapter direct you to assets available for additional information. Need to know information is highlighted in at-a-glance summary boxes throughout to help you quickly review key concepts. Personal quotes from the theorists help you gain insight and make each complex theory more memorable. Updated references include only published works to ensure accuracy and credibility.
