The rate of blood flow  
can be calculated if

the volume of blood  
flow and the time is

known; For example;

if 2460 ml of blood

flows through a blood

vessel in 4 minutes,

the rate of blood flow

= volume of blood /

number of minutes =

$2460 / 4 = 615$

ml/minute; From this

# Read Free Revision Notes

you may be asked to determine how much blood flows through the same vessel in one hour = rate of blood flow (ml/min) x 60 = 615 x ...
