Mapping Forestry describes how geographic information system (GIS) software supports the business of forestry in today's era of economic changes, increased global competition, and diminishing resources. In twenty scenarios from the United States, Germany, Brazil, Romania, Finland, and Cambodia, foresters share how they use GIS to manage commercial operations and sustainable stewardship. Forest managers tell how computer-generated maps and GIS analysis help them determine the best places to build roads, whether logging in a particular area is commercially feasible, which fire-damaged areas should be restored first, and more. Mapping Forestry contains 20 chapters of full-color maps, featuring detailed descriptions of the types of GIS analysis that they represent, making it an excellent tool for forestry professionals.

Drawing on decades of experience in training yoga teachers, Donna Farhi offers the first book to set professional standards for yoga teachers. Teaching Yoga explores with depth and compassion a variety of topics both practical and philosophical, including how to create healthy boundaries; the student-teacher relationship (including whether a sexual relationship is acceptable); how to create physical and emotional safety for the student; what is a reasonable class size; how much a class should cost; and how to conduct the business of teaching while upholding the integrity of yoga as a philosophy, a science, and an art.

Proper design of printed circuit boards can make the difference between a product passing emissions requirements during the first cycle or not. Traditional EMC design practices have been simply rule-based, that is, a list of rules-of-thumb are presented to the board designers to implement. When a particular rule-of-thumb is difficult to implement, it is often ignored. After the product is built, it will often fail emission requirements and various time consuming and costly add-ons are then required. Proper EMC design does not require advanced degrees from universities, nor does it require strenuous mathematics. It does require a basic understanding of the underlying principles of the potential causes of EMC emissions. With this basic understanding, circuit board designers can make trade-off decisions during the design phase to ensure optimum EMC design. Consideration of these potential sources will allow the design to pass the emissions requirements the first time in the test laboratory. A number of other books have been published on EMC. Most are general books on EMC and do not focus on printed circuit board is intended to help EMC engineers and design design. This book engineers understand the potential sources of emissions and how to reduce, control, or eliminate these sources. This book is intended to be a 'hands-on' book, that is, designers should be able to apply the concepts in this book directly to their designs in the real-world.

It is 1863, but not the one it should be. Time has veered wildly off course, and now the first moves are being made that will lead to a devastating world war and the fall of the British Empire. Caught in a tangled web of cause, effect, and inevitability, little does Burton realize that the stakes are far higher than even he suspects. A final confrontation comes in the mist-shrouded Mountains of the Moon, in war-torn Africa of 1914, and in Green Park, London, where, in the year 1840, Burton must face the man responsible for altering time: Spring Heeled Jack! Burton and Swinburne's third adventure is filled with eccentric steam-driven technology, grotesque characters, and bizarre events, completing the three-volume story arc begun in The Strange Affair of Spring Heeled Jack and The Curious Case of the Clockwork Man. From the Trade Paperback edition.

The emergence of content- and context-aware search engines, which not only personalize searching and delivery but also the content, has caused the emergence of new infrastructures capable of end-to-end ubiquitous transmission of personalized multimedia content to any device on any network at any time. Personalizing and adapting content requires processing of content and recognizing patterns in users' behaviour on the other. Personalizing and adapting the semantic content of multimedia enables applications to make just-in-time intelligent decisions regarding this content, which in turn makes interaction with the multimedia content an individual and individually rewarding experience. Highlighting the changing nature of the field, Advances in Semantic Media Adaptation and Personalization, Volume Two discusses the state of the art, recent advances, and future outlooks for semantic media adaptation and personalization. Topics include: Collaborative Content Modeling Automatic Content Feature Extraction to Content Models Semantic Languages for Content Description Video Content Adaptation Adaptive Video Content Retrieval Content Similarity Detection Personalized Content Podcasting Adaptive Web Interaction As content and service providers recognize the value of new services and new markets, they will invest in technologies that adapt and personalize content. Industry, in response, has released new standards such as MPEG-7, MPEG21, and VC-1 that enable propagation of semantic media, adaptation, and personalization. Consequently, a broad range of applications are emerging across many industry sectors, such as music, film, games, television, and sports. Bringing together insight from researchers and practitioners, this book provides a sampling of the latest thinking in the field.

Ever wondered where noodles came from? How Worcester Sauce was invented? Or even who the "Cucumber King of Burma" was? Beginning with the hippo soup eaten in Africa in 6000 BC, through to the dangerous blowfish enjoyed in contemporary Japan, A Curious History of Food and Drink reveals the bizarre origins of the food and drink consumed throughout history. From the pheasant brains and flamingo tongues scoffed by the Roman emperor Vitellius, to the unusual uses of licorice (once a treatment for sore feet), Ian Crofton makes use of original sources--including journals, cookbooks and manuals--to reveal the bizarre, entertaining and informative stories behind the delicacies enjoyed by our ancestors.

In the midst of gorgeous St. Bart's, a few days before Christmas, a Senator's daughter is found stabbed and strangled on the beach—the day after her engagement party. While the rich and famous are pouring in to celebrate the holidays, the local police are desperate to keep it quiet and not cause an uproar. But the Senator's family wants justice for their daughter, and they hire Cindy and Mattheus to solve the crime. As Cindy and Mattheus investigate, they meet the elite crowd surrounding the Senator's family, an exclusive world of unimaginable wealth, of luxurious parties on yachts and private villas. They learn of all the people who may have wanted the young woman dead, all the jealousies and rivalries, the secret ex-es and affairs. They meet her devastated fiancé, her twin sister and her distraught Mom—all intent on the killer's being found. They meet the corrupt police force, who wants them stopped, and a rich Russian mogul who controls half the island—and has his own agenda to bring down the senator. As they delve deeper, they learn the many secrets of this exclusive family and the young woman, and discover that all was not as perfect as it appeared to be. As they get close to the answers, Cindy faces personal danger, while at the same time her relationship with Mattheus grows deeper—and faces a crisis of its own. And as the two of them are about to leave the island, a sudden twist in events changes everything. Ultimately, they come to learn that on the pristine, perfect St. Bart's, everything is not always as it seems to be. DEATH BY DESIRE is both a stand-alone novel and Book #4 in the Caribbean Murder series, following DEATH BY HONEYMOON (Book #1), DEATH BY DIVORCE (Book #2) and DEATH BY MARRIAGE (Book #3).
