Looking after our water resources has never been more important or more challenging. The world needs engineering graduates who can tackle the problems of flooding, pollution and infrastructure design. Our large multidisciplinary water research group drives our research-led teaching and module content. You ' ll cover essential engineering principles like fluid mechanics, chemistry, hydrology ...

A branch of civil engineering concerned with the development of sources of supply, transmission, distribution, and treatment of water. The term is used most frequently in regard to municipal water works, but applies also to water systems for industry, irrigation, and other purposes. Water obtained from subsurface sources, such as sands and gravels and porous or fractured rocks, is called ground water.

concerned with the flow and conveyance of fluids, principally water and sewage. One feature of these systems is the extensive use of gravity as the motive force to cause the movement of the fluids. This area of civil engineering is intimately related to the design of bridges, dams, channels, canals, and levees, and to both ...
